

READINESS LIVING WORKSHOPS

410.90 TABLETOP EXERCISE: "ROGUE BEAR" PANDEMIC EPICENTER

In our tabletop scenario, an example of why the Readiness Living Care Action Plan (RLCAP) is important is dramatized in international developments that demonstrate an impact locally. ***Dependency on government dies hard and when the government has no resources or answers to offer, where will you be?***

410.91: HOURLY; 1:00 AM SIT REPORT: A phone call is received from a Readiness Living Partner stating that a ***"Rogue Bear"*** has been reported in your city as of midnight. You have less than five hours to escape the Rogue Bear. The **International Airport** was the source of the outbreak and it was closed immediately as governmental agencies activated response measures.

Event: There have been three confirmed cases of a mysterious new SARS-like virus in your area. The CDC informed the World Health Organization (WHO) that a 39-year-old man, along with his wife and son, were hospitalized with the novel corona virus and all three died within two hours. So far WHO has recorded 15 confirmed cases of the ***mutated*** corona virus since yesterday. All of these cases resulted in death. Agencies have determined that the virus has mutated to an airborne contagion. Morbidity is currently 100%. Epidemiology is yet to be determined.

410.92: HOURLY; 2:00 AM SIT REPORT: Readiness Living Care Action Plan (RLCAP) activation; your care center for evacuation is a central Wal-Mart parking lot. Readiness Living Partners (RLP) will begin the Care Action Plan for immediate departure to RLP group in Atmore, an Amish community. Absolutely no phone calls will be made; this is a face-to-face recovery and departure procedure with no discussion of events. You observe the RLP's physical symptoms, no sick individuals will be invited; you will ask if they are willing to depart immediately with little or no hope of returning. The partner must give a simple ***yes or no without you providing further explanation.***

Table Top: **Do you have a Ready Pack? What would be your response to this event, yes-no?**

Table Top: **Have you mapped your congregation or Readiness Living Care Partners?**

Table Top: **Do you have participant profiles and indexing on your RLP's?**

Table Top: **How will you prioritize the contact schedule for the CAP profile participants?**

410.93: HOURLY; 3:00 AM SIT REPORT: ***The Ring of Fire*** is emerging as governmental elements activate their biohazard **Incident Action Plan**. RLP is dispatching their response teams. You have ample vehicles and gas currently for your caravan departure. You have established a failsafe departure window of 4:00 AM. The willing RL Partners are already arriving. You have dispatched three scout teams to report road conditions and act as relays along your predetermined avenue of egress. The authorities are utilizing emergency directives and are quietly escorting doctors, nurses, and essential medical personnel, without explanation or choice, **to areas outside the epicenter.**

Table Top: **What is the CDC's Ring of Fire?**

410.94: HOURLY; 4:00 AM SIT REPORT: All electronic media service (phone, cable, internet, etc.) to the area has been terminated by government officials using a predetermined means. Plans for curfews are being initiated. Plans are being arranged for hospital, school, church, daycare closures. Only those businesses deemed essential services will remain open. Roadblocks will soon stop all incoming and outbound traffic; Coast Guard is closing all waterway traffic along with the DOT. The National Guard has been activated. A countywide home quarantine is being planned. Your caravan is ready to depart based on reports from the three scout teams running point. Depart.

Table Top: **What would you do differently in such a scenario?**

410.95 HOURLY; 5:00 AM SIT REPORT: Arrive at rendezvous for a two day self quarantine.

410.96 HOURLY; 6:00 AM SIT REPORT: Debrief. Discuss a self quarantine compound structuring.
